A dedicated Front End Developer aspiring to become a Full Stack Developer. I'm focused on enhancing my skills and gaining hands-on experience in Back End Development to make this dream a reality. I enjoy learning new things, paying attention to detail, and following my passion for building a career in which I love.

## PROJECT

### Souled

- The jersey and boots purchasing website allows users to browse and buy sports apparel. It features user authentication for secure accounts, an intuitive interface with HTML and CSS, and PHP for handling transactions and managing inventory.

### Gamercult

- The game purchase website includes user authentication and OTP verification. Users register, log in, and manage profiles with HTML, CSS, and PHP.

### Contact List

- Create a contact list application that allows users to add, delete, and update contacts. The UI will include forms for adding and editing contacts, and options to remove contacts. The app will feature a responsive design and dynamic interactions using JavaScript.

### Invoice Generator

- The basic invoice generator uses HTML for structure, CSS for styling, and JavaScript for dynamic functionality. Users can input item details, quantities, and prices to automatically generate and display an invoice with calculated totals and formatting.

## Education

**Sri Shakthi Institute of Engineering and Technology**  
**B.E Computer Science and Engineering**

OCT 2022 - OCT 2026
